

Report of Experience at the American Society for Tropical Medicine and Hygiene Annual Meeting

New Orleans, Louisiana, United States
October 27-November 1

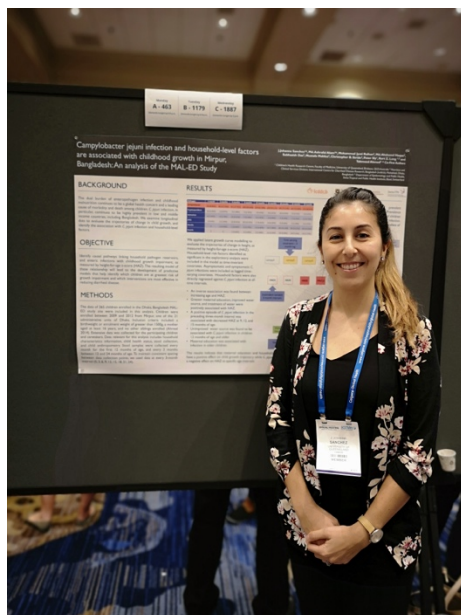

J. Johanna Sanchez (UQ ID 992378805)

ORAL PRESENTATION – October 31, 2018

My presentation at the Global Health – Maternal, Child, and Neonatal Health session, *'Household-level factors associated with childhood growth in Bangladesh: An analysis of the Multiple Indicator Cluster Survey, 2012-2013'* was very well received. I received positive feedback from senior researchers in the field, and even some recommendations for other household factors to explore in my research.

POSTER PRESENTATION – October 31, 2018

My poster titled *'Campylobacter jejuni infection and household-level factors are associated with childhood growth in Mirpur, Bangladesh: An analysis of the MAL-ED Study'* which presented preliminary results of my complex analysis of the relationship between enteric infection, child growth, and household factors was also very positively received. There was a lot of interest in the methodology being used for this analysis, as well as in the interesting results being generated. I was able to meet colleagues that were involved in the initial MAL-ED study, who provided helpful input and offered to be available for consulting.

Overall, the conference was excellent and featured presentations from key researchers from across the globe. It provided several networking learning opportunities.
